

# 16-745: Optimal Control and Reinforcement Learning

Spring 2021

## Course Description

This is a course about how to make robots move through and interact with their environment with speed, efficiency, and robustness. We will survey a broad range of topics from nonlinear dynamics, linear systems theory, classical optimal control, numerical optimization, state estimation, system identification, and reinforcement learning. The goal is to provide students with hands-on experience applying each of these ideas to a variety of robotic systems so that they can use them in their own research.

**Prerequisites:** Strong linear algebra skills, experience with a high-level programming language like Python, MATLAB, or Julia, and basic familiarity with ordinary differential equations.

## Instructors

Prof. Zac Manchester	<b>Email:</b> <a href="mailto:zacm@cmu.edu">zacm@cmu.edu</a>
TA: Brian Jackson	<b>Email:</b> <a href="mailto:bjackso2@andrew.cmu.edu">bjackso2@andrew.cmu.edu</a>
TA: Kevin Tracy	<b>Email:</b> <a href="mailto:ktracy@cmu.edu">ktracy@cmu.edu</a>
TA: Alexander Bouman	<b>Email:</b> <a href="mailto:abouman@andrew.cmu.edu">abouman@andrew.cmu.edu</a>
TA: Chiheb Boussema	<b>Email:</b> <a href="mailto:chiheb@cmu.edu">chiheb@cmu.edu</a>

## Logistics

- Lectures will be held Tuesdays and Thursdays 4:40–6:00 PM Eastern time on Zoom for the first two weeks of class, hopefully transitioning to in-person in Room 160 in Hall of Arts after that.
- Office hours will be **TODO: based on survey**.
- Homework assignments will be due by 11:59 PM Eastern time on Wednesdays. Two weeks will be given to complete each assignment.
- GitHub will be used to distribute and collect assignments.
- [Piazza](#) will be used for general discussion and Q&A outside of class and office hours.
- There will be no exams. Instead, students will form groups of up to five to complete a project on a topic of their choice.

## Learning Objectives

By the end of this course, students should be able to do the following:

1. Analyze the stability of dynamical systems
2. Design LQR controllers that stabilize equilibria and trajectories
3. Use offline trajectory optimization to design trajectories for nonlinear systems
4. Use online convex optimization to implement model-predictive control
5. Understand the effects of stochasticity and model uncertainty
6. Directly optimize feedback policies when good models are unavailable

## Learning Resources

There is no textbook required for this course. Video recordings of lectures and lecture notes will be posted online. Additional references for further reading will be provided with each lecture.

## Homework

Four homeworks will be assigned during the semester. Students will have at least two weeks to complete each assignment. All homework will be distributed and collected using GitHub. Solutions and grades will be returned within one week of homework due dates.

## Project Guidelines

Students should work in groups of 1–5 to complete a substantial final project. The goal is for students to apply the course content to their own research. Project proposals will be solicited on the first homework assignment, and topics will be selected in consultation with the instructors.

Project grades will be based on a short presentation given during the last week of class and a final report submitted by May 10. Reports should be written in the form of a 6–8 page conference paper using the standard [two-column IEEE format](#).

## Grading

Grading will be based on:

- 50% Project
- 40% Homework
- 10% Participation

Attendance during lectures is not required to earn a full participation grade. Students can also participate through any combination of office hours, Piazza discussions, project presentations, and by offering constructive feedback about the course to the instructors.

## Course Policies

**Late Homework:** Students are allowed a budget of 6 late days for turning in homework with no penalty throughout the semester. They may be used together on one assignment, or separately on multiple assignments. Beyond these six days, no other late homework will be accepted.

**Accommodations for Students with Disabilities:** If you have a disability and are registered with the Office of Disability Resources, I encourage you to use their online system to notify me of your accommodations and discuss your needs with me as early in the semester as possible. I will work with you to ensure that accommodations are provided as appropriate. If you suspect that you may have a disability and would benefit from accommodations but are not yet registered with the Office of Disability Resources, I encourage you to contact them at [access@andrew.cmu.edu](mailto:access@andrew.cmu.edu).

**Statement of Support for Students' Health & Well-Being:** Take care of yourself. Do your best to maintain a healthy lifestyle this semester by eating well, exercising, avoiding drugs and alcohol, getting enough sleep, and taking some time to relax. This will help you achieve your goals and cope with stress.

If you or anyone you know experiences any academic stress, difficult life events, or feelings like anxiety or depression, we strongly encourage you to seek support. Counseling and Psychological Services (CaPS) is here to help: call 412-268-2922 and visit <http://www.cmu.edu/counseling>. Consider reaching out to a friend, faculty, or family member you trust for help getting connected to the support that can help.

*If you or someone you know is feeling suicidal or in danger of self-harm, call someone immediately, day or night:*

*CaPS: 412-268-2922*

*Re:solve Crisis Network: 888-796-8226*

*If the situation is life threatening, call the police:*

*On campus: CMU Police: 412-268-2323*

*Off campus: 911*

If you have questions about this or your coursework, please let me know. Thank you, and have a great semester.

## Tentative Schedule

Week	Dates	Topics	Assignments
1	Jan 18 Jan 20	Course Overview, & Dynamics Intro Stability, Discrete-Time Dynamics	Survey
2	Jan 25 Jan 27	Optimization Intro Numerical Optimization Pt. 1	HW 1 Out
3	Feb 1 Feb 3	Numerical Optimization Pt. 2 & Optimal Control Intro Pontryagin, Shooting Methods, & LQR Intro	
4	Feb 8 Feb 10	LQR as a QP & Riccati Equation Dynamic Programming & Intro to Convexity	HW 1 Due HW 2 Out
5	Feb 15 Feb 17	Convex Model-Predictive Control Intro to Trajectory Optimization, Iterative LQR, & DDP	
6	Feb 22 Feb 24	DDP with Constraints and Free Final Time Direct Trajectory Optimization, Collocation, & SQP	HW2 Due HW3 Out
7	Mar 1 Mar 3	Attitude Intro: SO(3) & Quaternions Optimizing with Attitude	
8	Mar 8 Mar 10	No Class No Class	HW3 Due HW4 Out
9	Mar 15 Mar 17	LQR with Attitude, Quadrotors, & Contact Intro Trajectory Optimization for Hybrid Systems	
10	Mar 22 Mar 24	Data-Driven Methods & Iterative Learning Control Stochastic Optimal Control & LQG	HW4 Due
11	Mar 29 Mar 31	Robust Control & Minimax DDP RL from an Optimal Control Perspective	
12	Apr 5 Apr 7	Practical Tips & Tricks, Control History No Class	
13	Apr 12 Apr 14	No Class Case Study: How to Land a Rocket	
14	Apr 19 Apr 21	Case Study: How to Drive a Car Case Study: How to Walk	
14	Apr 26 Apr 28	Project Presentations Project Presentations
